

Curriculum Policy

At Strand Primary Academy, we work hard to make links in different curriculum areas and strive to ensure that our lessons are fun and engaging for the children.

We provide a predominately skills based curriculum that is taught through engaging, creative topics. It is important that our classrooms represent the children's experiences and learning. So where possible we create immersive learning spaces that enrich the learning experience across key stages 1 & 2.

These environments grow and develop throughout a topic; demonstrating the children's learning journey. This helps our children develop core skills in reading, writing, the spoken word, maths and science.

With a variety of creative spaces in which work and learn children are focused and display excellent behaviours to learn. This pedagogy enables the social, moral, spiritual and cultural development of our children to be interwoven into the very fabric of school life and their daily learning.

To 'hook' our children into their learning we deliver unlocking events. These events raise the engagement of our learners and, where possible, provide a real project which relates to the world in which we live in today. Our projects aim to enable children to present their learning in a meaningful manner; often to an audience or our wider school community.

This curriculum facilitates a variety of ways to interact and experience a myriad of lessons presented in an engaging and simulating way –ensuring the very best outcomes for all of our children.
